Claim 7; Page 63-65; 115pp; English.

XX

This polypeptide comprises the novel 97.6 kDa surface exposed compromentation ompil of the human respiratory pathogen Chlamydia CC protein Ompil of the human respiratory pathogen Chlamydia CC preumoniae. Its amino acid sequence was deduced from DNA (see CC AAX06823) isolated from a C. pneumoniae expression library. The CC invention provides 12 novel surface exposed proteins, Omp4-Ompi5 CC (see AAX06816-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with Chlamydia CC pneumoniae. The test comprises detecting antibodies specific for CC Omp4-Omp15 or detecting nucleic acid fragments encoding these outer CC membrane proteins, especially by PCX. The proteins are also used CC in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of CC waccines for effecting in vivo expression of antipgens. The vaccines for effecting in vivo expression of antipgens. The which are possibly associated with C. pneumoniae.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and/or the presence of Chlamydia in a sample. The polypeptides may also be used to induce an immune response in a mammal. The vaccine vector comprising the polynucleotides is used to induce an immune response in a mammal. Antibodies directed against the polypeptides may also be used therapeutically to treat and/or prevent a Chlamydia

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                       This polypeptide comprises the novel 98.4 kba surface exposed protein Omp10 of the human respiratory pathogen Chlamydia pneumoniae. Its amino acid sequence was deduced from DNA (see AAX06822) isolated from a C. pneumoniae expression library. The invention provides 12 novel surface exposed proteins, Omp4-Omp15 (see AAX06817-28), and nucleic acid sequences encoding them (see AAX06816-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of waccines may also prevent atheroscierosis and bronchial asthma, which are notes that a speciated with C. pneumoniae and bronchial asthma,

Antisense sequences may be used to treat infections. The expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis, adult-onset asthma and acute exacerbations of asthma in adults.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence is a Chlamydia antigen of the invention, designated CPN100638. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 16; Fig
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding polypeptide antigens from Chlamydia useful for preventing, diagnosing and treating diseases such as community acquired pneumonia, bronchitis, sinusitis and asthmatic bronchitis, adult-onset
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2000-412339/35.
